

## COMPANY PROFILE 公司简介

- Daehung Pack is a family owned and operated company based in Southern China the behind-the-scenes partner for CPG FMCG brands who are scaling, breaking into retail, and are looking for a packaging partner who gets the pace.
- True to color. True to style. Trends come and go, technology evolves, but craft and passion are forever. Our founder MR GUO first learned the art and craft of printing techniques by hand. With ink-stained fingers, he transformed a small workshop into a market legacy for printed packaging and design.
- That passion is the foundation of success. While most companies react to trends, Daehung sets them. And, ensures that expertise and passion combine to create something truly remarkable for your products.

## Mission

Our mission is to create innovative, eco-friendly packaging that meets the needs of our customers and protects the planet.

## Visions

Our vision is to be a leader in sustainable packaging solutions, providing a wide range of products that are both functional and environmentally responsible. We strive to promote sustainability and reduce our carbon footprint by using renewable materials and reducing waste throughout the production process.

## Step 2. Printing

Utilizing an rotogravure printing process, we achieve vibrant and accurate colors by employing four-color process printing (CMYK) as well as a wide range of Pantone spot colors. Our high-speed, precision printing technology ensures exceptional quality and efficiency.

## Step 1. Design and Proof

Before production, we provide die lines and artwork. Upon approval, we conduct digital, offset, and cylinder proofing through our Color Management System for accuracy.

## Step 3. Lamination

A two-component adhesive bonds functional films like PET, nylon, aluminum foil, and CPP, enhancing durability and performance.

### Step 4. Aging

After printing and lamination, the material is stored at an optimal temperature for a period of time to stabilize adhesive properties.

### Step 5. Cut (Slitting)

The laminated rolls are precisely cut to size according to client specifications, ensuring seamless processing in subsequent stages.

### Step 6. Bag Making (Converting)

The cured laminated material is heat-sealed and formed into various pouch styles, such as three-side seal and stand-up pouches, meeting diverse packaging needs.

## WHY CHOOSE MINGDA/DAEHUNG

Cost reductions through innovative materials and streamlined production.

End-to-end support, from design to delivery.

Sustainable options to meet evolving market demands.

Exceptional customer service with a commitment to your success.
